Hybrid Operator & AI Architect. My competitive edge isn't just coding agents, but **translating business operational chaos into scalable, automated, and connected systems.** I design systems that execute B2B operations, ranging from agency workflows to deep AI orchestration infrastructure and digital products. I excel at detecting bottlenecks and solving complex technical problems with resilience and creativity.

> AGENCY SYSTEMS & APPLIED AUTOMATION

• Nanosilhouette / Silhouette OS

Founder & Product Architect

Created my own agency model and tech incubator, developing internal products to orchestrate AI-assisted services.

- ▶ **Silhouette OS (Beta):** Operating platform designed for agencies that centralizes processes, automations, and AI-assisted decisions. Integrated with React and TypeScript.
- ▶ **Silhouette Brain:** Cognitive engine built from scratch. Operates alongside my *Openclaw* agent to execute intelligent routing, tool sync, follow-ups, and prioritization of corporate workflows.

React / TypeScript

Openclaw Agent

Cognitive Routing

• Brandistry Automation Systems

Systems Administration & Orchestration

Radical optimization of internal agency operations, eradicating bottlenecks in delegation and project organization.

- ▶ **Massive Time Savings:** Automated critical delegation flows and integrated end-to-end processes connecting CRMs and

> OPERATIONAL PROFILE

"I do not surrender to technical friction. If a standard tool breaks or a process stalls, I engineer an alternative route. My focus is not

marketing ops.

- ▶ **Custom Framework Deployment:** Leveraged my proprietary agent framework, integrating **Antigravity** and **Silhouette Brain**, to operate agency tasks without constant human intervention.

> AI INFRASTRUCTURE & DEVELOPER PLATFORMS

- **Contract Generator SaaS**

Creator (Own B2B Product)

Scalable B2B platform I built from the ground up, utilizing generative models for parametric drafting and analysis of complex legal clauses in real-time.

LLM Integration

Prompt Engineering

React / Next.js

- **Multi-Agent GitHub Maintenance System**

Own Server-Side Infrastructure

Architecture of an autonomous agent swarm operating 24/7 on my own proprietary servers to resolve code friction.

- ▶ Automates PR reviews and "good first issue" resolution in massive repositories such as React, LangGraph, and JupyterLab.

LangGraph

Multi-Agent Orchestration

Python

- **CausalOS-Python & Pi-Mono**

Core Open Source Contributor

Contribution to foundational infrastructure aimed at industrializing AI development.

- ▶ **CausalOS:** Implementation of a causal memory layer to prevent typical RAG system amnesia.
- ▶ **Pi-Mono:** Deployment packaging (vLLM pods, CLIs), proving the ability to deliver hard tech to usable platforms.

merely writing code, but ensuring that systems solve real business problems and remain fully operational."
